

# North American Series 1232 High Temperature B & L

Sheet 1232

Merely by adding "Series 1232" to any otherwise standard description of bracket and linkage you will get high temperature B & L including a standoff mounting bracket and heat shield. The order will be referred to Engineering for an envelope. The price in all cases will be a uniform additional.

*Example:* 1014-8-E (6") Valve with B & L for Conoflow B10S Operator would be a specification for standard B & L at standard price, while 1014-8-E (6") Valve with Series 1232 B & L for Conoflow B10S Operator would be a specification for a special high temperature B & L which would be referred to Engineering and involve a uniform additional cost.

A typical high temperature B & L assembly is illustrated, along with some heat shields and standoff brackets. Contact Fives North American Combustion, Inc. for part number, price, and delivery.
